STETTLER P&H ELEVATOR PRESERVATION SOCIETY

*Come See
History in Action*

**HELP
PRESERVE OUR
HERITAGE**

P&H Elevator and Feedmill

Parrish & Heimbecker was founded by two flour milling families in 1909. The P&H Elevator in Stettler was built in the 1920's. The elevator handled many thousands of tons of grain over its many years of service. The capacity of the elevator and annex is approximately 40,000 bushels. The elevator closed in 2003.

The feedmill was added in the late 1940's and served many farmers in grinding and mixing their livestock feeds. Virtually every farmer in the Stettler area would have used the service provided by this elevator/feedmill. This is one of the last elevator/feedmill complexes left in Alberta.

Visit the Coffee Stop

Wednesday, Thursday
9 - 11a.m.

Completed Restoration Projects

To Operating Condition

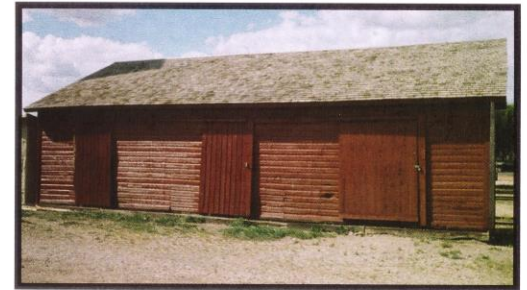

10 HP International
1912 Elevator Engine

Little Giant
1887 Hand Fed Threshing Machine

THE ELEVATOR IS IN WORKING ORDER.
IN THE FUTURE,
WITH THE HELP OF OUR MANY
VOLUNTEERS, WE HOPE TO RESTORE AND
PRESERVE IT AS A
DEMONSTRATION ELEVATOR AND FEEDMILL

P&H Coal Shed

Coal was brought to town by train and off-loaded into the coal shed. Teams of horses with wagons and or sleighs (in the winter) would pick up coal from the coal shed and deliver the coal around town to the houses and businesses. The Coal Shed was a hub of activity until natural gas came to Stettler in the 1940's. This building is unique as very few coal sheds are still in existence.

P&H Feed Shed

The feed shed was used to store livestock supplement. These supplements were mixed with the feeds being prepared in the feed mill. Restoration of this section is nearing completion and will be used for many activities.
